Julia Polak; 310 965

Dane:

$$G = 30dB$$

$$A_{zt} = 0.5dB$$

$$A_{s} = 0.1dB$$

$$P_{m} = 3dB$$

$$\alpha_{SMF} = 0.19 \frac{dB}{km}$$

$$\alpha_{DCF} = 0.5 \frac{dB}{km}$$

$$D_{SMF} = 4.5 \frac{ps}{nm * km}$$

$$D_{DCF} = -130 \frac{ps}{nm * km}$$

Obliczenie:

$$L_{SMF} \leq \frac{(G - P_m - mA_{z\dagger} + A_s)}{D_{DCF}A_s + L_s\alpha_{SMF}D_{DCF} - \alpha_{DCF}D_{SMF}L_s}L_sD_{DCF}$$

$$L_{SMF} \leq \frac{(30dB - 3dB - 4*0.5dB + 0.1dB)}{-130\frac{ps}{nm*km}*0.1dB + 10km*0.19\frac{dB}{km}* - 130\frac{ps}{nm*km} - 0.5\frac{dB}{km}*4.5\frac{ps}{nm*km}*10km} \\ 10km* - 130\frac{ps}{nm*km}*10km$$

$$L_{SMF} \leq 115.5 \ km \approx 115km$$
